

**M E S COLLEGE OF ARTS, COMMERCE AND SCIENCE**  
‘Vidyasagara’, Prof. M P L Sastry Road, Malleswaram, Bengaluru 560003

# **A booklet on Course Outcome**

**An IQAC Initiative  
2022 – 2023**

## Table of Contents

1. <b>Course Outcome Biotechnology</b> .....	3
2. <b><u>Course Outcome Botany</u></b> .....	6
3. <b>Course Outcome Chemistry</b> .....	9
4. <b>Course Outcome Commerce</b> .....	14
5. <b>Course Outcome Computer Science</b> .....	19
6. <b>Course Outcome Economics</b> .....	21
7. <b>Course Outcome Electronics</b> .....	22
8. <b>Course Outcome of General English Courses:</b> .....	26
9. <b>Course Outcome of the Optional English</b> .....	26
10. <b>Course Outcome Hindi</b> .....	27
11. <b>Course Outcome History</b> .....	28
12. <b>Course Outcome Journalism</b> .....	31
13. <b>Course Outcome Kannada</b> .....	32
14. <b>Course Outcome Optional Kannada Bhasha Pathya</b> .....	35
15. <b>Course Outcome Mathematics</b> .....	38
16. <b>Course Outcomes Post Graduate Department of Mathematics</b> .....	39
17. <b>Course Outcome Physics</b> .....	45
18. <b>Course Outcome Psychology</b> .....	52
19. <b>Course Outcome Sanskrit</b> .....	57
20. <b>Course Outcome Sociology</b> .....	58
21. <b>Course Outcome Statistics</b> .....	59
22. <b>Course Outcome Zoology</b> .....	60

## BIOTECHNOLOGY

Paper	Course Name	Course outcome
<b>DSC-TIBTCIOI</b>	<b>CELL BIOLOGY AND GENETICS</b>	<p>At the end of the course the student should be able to</p> <ul style="list-style-type: none"> <li>• Understand concepts in Biotechnology and demonstrate knowledge acquired in interdisciplinary skills in cell biology and genetics</li> <li>• Comprehend the structure of a cell with its organelles</li> <li>• Understand the chromatin structure and its location</li> <li>• Understand the basic principles of life, and how a cell divides</li> <li>• Explain the organization of genes and chromosomes, chromosome morphology and its aberrations</li> </ul>
<b>DSC-T2BTC102</b>	<b>MICROBIOLOGICAL METHODS</b>	
<b>DCS -3T</b>	<b>BIOMOLECULES</b>	<p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> <li>• Acquire knowledge about types of biomolecules, structure, and their functions</li> <li>• Will be able to demonstrate the skills to perform bio analytical techniques</li> <li>• Apply comprehensive innovations and skills of biomolecules to biotechnology field</li> </ul>
<b>DCS -4T</b>	<b>MOLECULARBIOLOGY</b>	<p>At the end of the course the student should be able to</p> <ul style="list-style-type: none"> <li>• Study the advancements in molecular biology with latest trends.</li> <li>• Will acquire the knowledge of structure, functional relationship of protein and nucleic acids.</li> <li>• Aware about the basic cellular processes such as transcription, translation, DNA replication and repair mechanisms.</li> </ul>
<b>BTT 501</b>	<b>GENETIC ENGINEERING AND EBT</b>	<p>Students learn about genetic engineering and its application in the field of agriculture and medicine</p> <ul style="list-style-type: none"> <li>▪ They learn to obtain gene from the source and ligating it to the vector and transforming to a host cell to get the desired product</li> <li>▪ DNA finger printing</li> <li>▪ Biogas production, renewable and non-renewable resources</li> <li>▪ Microbial production of H<sub>2</sub>, ethyl alcohol</li> <li>▪ GM organisms and its application in bioremediation</li> </ul> <p>Importance of N<sub>2</sub> fixing organisms and its production in large scale as biofertilizers, which helps in increasing the percentage of crop.</p>
<b>BTP 502</b>	<b>GENETIC ENGINEERING AND EBT</b>	<p>Research institute important basic techniques:</p> <ul style="list-style-type: none"> <li>▪ DNA AND RNA isolation from plant and animal source</li> <li>▪ Plasmid DNA isolation from E. coli</li> <li>▪ Gel electrophoresis technique to separate DNA</li> <li>▪ Protein separation technique by SDS PAGE</li> </ul> <p>Examination of bacteria in water</p>
		<p>Students learn about:</p> <ul style="list-style-type: none"> <li>▪ Different types of immunity- innate, adaptive, cell mediated, humoral, active and passive</li> </ul>

<b>BTT 601</b>	<b>IMMUNOLOGY AND ABT</b>	<ul style="list-style-type: none"> <li>▪ Antigens and its properties</li> <li>▪ Antibodies, different types, properties and functions</li> <li>▪ Production of antibodies</li> <li>▪ Blood typing</li> <li>▪ Complement system</li> <li>▪ Hypersensitivity reactions in humans</li> <li>▪ Animal tissue culture</li> <li>▪ Types of media used for ATC</li> <li>▪ Growth hormones – EGF, FGF, PDGF, IL-1 &amp;2, NGF, Erythropoietin</li> <li>▪ Techniques of disaggregation of animal tissue, primary and secondary culture</li> <li>▪ Cell lines, examples and transformation of animal cell lines</li> <li>▪ HAT selection, selectable markers, expression vectors , over production o and downstream processing of expressed proteins</li> <li>▪ Transgenic animals and applications</li> <li>▪ Monoclonal antibodies and applications</li> </ul> <p>Production of vaccines</p>
<b>BTP 602</b>	<b>IMMUNOLOGY AND ABT</b>	<p>Pathologically important techniques:</p> <ul style="list-style-type: none"> <li>▪ Blood grouping and WBC counting</li> <li>▪ Diagnosis of typhoid and syphilis by WIDAL and VDRL METHOD</li> <li>▪ ELISA techniques applicable to diagnose various virus and bacteria like dengue</li> </ul> <p style="text-align: center;">: DOT ELISA and Sandwich ELISA</p> <ul style="list-style-type: none"> <li>▪ Finding concentration of antigen in serum by rocket immune electrophoresis technique</li> <li>▪ Finding identity of two antigens by ouchterlony double diffusion technique</li> </ul> <p>Serum separation from blood and serum precipitation technique</p>
<b>BTT 701</b>	<b>PLANT BIOTECHNOLOGY</b>	<p>Students learn about plant hormones</p> <ul style="list-style-type: none"> <li>▪ Sterilization techniques</li> <li>▪ Plant growth media</li> <li>▪ Micro propagation techniques</li> <li>▪ Primary and secondary metabolites</li> <li>▪ Organ culture – ovary, ovule, anther, embryo and endosperm</li> <li>▪ Somatic embryogenesis and somatic hybridization</li> <li>▪ Transgenic plants and technique s of transformation</li> <li>▪ Role of tissue culture in agriculture. Horticulture and forestry</li> </ul> <p style="text-align: center;">Intellectual property rights</p>
<b>BTP 702</b>	<b>PLANT BIOTECHNOLOGY</b>	<p>Students learn the technique of:</p> <ul style="list-style-type: none"> <li>▪ Plant tissue culture media</li> <li>▪ Plants organ culture – callus, shoot tip, anther, nodal, , suspension culture</li> <li>▪ Preparation of industrially important synthetic seeds</li> </ul> <p style="text-align: center;">Isolation of protoplast for creating cybrids</p>
		<p>Students learn about :</p> <ul style="list-style-type: none"> <li>▪ Fermenters</li> <li>▪ Techniques of fermentation</li> <li>▪ Downstream processing of fermented products</li> <li>▪ Methods of strain improvement</li> <li>▪ Upstream processing before fermentation</li> </ul>

<p><b>BTT 801</b></p>	<p><b>INDUSTRIAL BIOTECHNOLOGY</b></p>	<ul style="list-style-type: none"> <li>▪ Production of microbial products – alcohol, organic compounds, antibiotic, aminoacids, Vitamin b12</li> <li>▪ Enzyme technology and its application</li> <li>▪ Fermented food products – SCP and SCO</li> </ul> <p>Mass culture of spirullina, production of xanthum gum, saffranin, capascin, PHA and PHB</p>
<p><b>BTP 802</b></p>	<p><b>INDUSTRIAL BIOTECHNOLOGY</b></p>	<p>Students learn industrially important basic techniques:</p> <ul style="list-style-type: none"> <li>▪ Algal and fungal culture for mushroom, vitamins, antibiotic and acid production</li> <li>▪ Estimation of acid and sugar</li> <li>▪ Cell immobilization techniques</li> <li>▪ Alcohol estimation by specific gravity method</li> </ul> <p style="text-align: center;">Industrial visits to various industries</p>

## BOTANY

Paper	Course Name	Course outcome
<b>PAPER 1</b>	<b>MICROBIAL DIVERSITY AND TECHNOLOGY</b>	<ul style="list-style-type: none"> <li>• Understand the fascinating diversity, evolution, and significance of microorganisms.</li> <li>• Comprehend the systematic position, structure, physiology and life cycles of microbes and their impact on humans and environment.</li> <li>• Gain laboratory skills such as microscopy, microbial cultures, staining, identification, preservation of microbes for their applications in research and industry.</li> </ul>
<b>PAPER 2</b>	<b>DIVERSITY OF NON-FLOWERING PLANTS</b>	<ul style="list-style-type: none"> <li>• Understand the diversity and affinities among Algae, Bryophytes, Pteridophytes and Gymnosperms.</li> <li>• Understand the morphology, anatomy, reproduction and life cycle across Algae, Bryophytes, Pteridophytes and Gymnosperms, and their ecological and evolutionary significance.</li> <li>• Obtain laboratory skills/explore non-flowering plants for their commercial applications.</li> </ul>
<b>BOT-A-3.1</b>	<b>PLANT ANATOMY AND DEVELOPMENTAL BIOLOGY</b>	<p>The students will be able to:</p> <ul style="list-style-type: none"> <li>• Observation of variations that exist in internal structure of various parts of a plant and as well as among different plant groups in support for the evolutionary concept.</li> <li>• Skill development for the proper description of internal structure using botanical terms, their identification and further classification.</li> <li>• Induction of the enthusiasm on internal structure of locally available plants.</li> <li>• Understanding various levels of organization in a plant body with an outlook in the relationship between the structure and function through comparative studies.</li> <li>• Observation and classification of the floral variations from the premises of college and house.</li> <li>• Understanding the various reproductive methods sub-stages in the life cycle of plants</li> <li>• Observation and classification of the embryological variations in angiosperms.</li> <li>• Enthusiasm to understand evolution based on the variations in reproduction among plants.</li> </ul>
<b>BOT-A-4.1</b>	<b>ECOLOGY AND CONSERVATION BIOLOGY</b>	<p>The students will be able to:</p> <ul style="list-style-type: none"> <li>• Understanding the fundamental concepts in ecology, environmental science and phytogeography.</li> <li>• Concept development in conservation, global ecological crisis, Sustainable development and pros and cons of human intervention.</li> <li>• Enable the student to appreciate bio diversity and the importance of various conservation strategies, laws and regulatory authorities and global issues related to climate change and sustainable development.</li> </ul>

<b>PAPER 5</b>	<b>TAXONOMY AND ECONOMIC BOTANY</b>	<p>Students Learn</p> <ul style="list-style-type: none"> <li>▪ Structure and modification of root, stem and leaf</li> <li>▪ Morphological features of inflorescence, flower and fruit.</li> <li>▪ Identification and characterization of plants based on the taxonomic characters and assign them to the respective families</li> <li>▪ Use of technical terms for describing plants</li> <li>▪ Use of ICBN rules</li> <li>▪ Herbarium techniques</li> <li>▪ How to study local flora</li> </ul> <p>Economic importance of different parts of plants and their significance</p>
<b>PAPER 6</b>	<b>MOLECULAR BIOLOGY, GENETIC ENGINEERING, BIOTECHNOLOGY, AND PLANT PHYSIOLOGY</b>	<p>Students Learn</p> <ul style="list-style-type: none"> <li>▪ Quantitative analysis of starch, proteins, Reducing sugars and Lipids</li> <li>▪ Determination of osmotic potential of cell sap by plasmolytic method</li> <li>▪ Determination of Stomatal Index</li> <li>▪ Streaming of protoplasm to show cyclosis</li> <li>▪ Study of Osmosis and transpiration experiments</li> </ul> <p>Study of phloem transport by ringing Experiments</p>
<b>PAPER 7</b>	<b>CYTOLOGY, GENETICS, EVOLUTION AND PLANT BREEDING</b>	<p>Students Learn</p> <ul style="list-style-type: none"> <li>▪ Preparation of cytological stains</li> <li>▪ Preparation of permanent slides of mitosis and meiosis using plant material Allium root tips and flowers</li> <li>▪ Karyotype and Ideogram: Camera Lucida Drawing</li> <li>▪ Plant Breeding Techniques</li> </ul> <p>Solve plant Genetic Problems</p>
<b>PAPER 8</b>	<b>PLANT PHYSIOLOGY III</b>	<ul style="list-style-type: none"> <li>▪ Defense mechanisms in plants Students learn</li> <li>▪ Separation of photosynthetic pigments by paper chromatography and measure of Rf values</li> <li>▪ Determination of rate of photosynthesis at different wavelength of light</li> <li>▪ Determination of rate of photosynthesis at different concentration of CO<sub>2</sub></li> <li>▪ Estimation of Ascorbic Acid content in plant sample</li> <li>▪ Determination of RQ of carbohydrates, fats and proteins</li> <li>▪ Determination of rate of growth in plants using ArC Auxanometer</li> </ul> <p>Study of manufacture of Alcohol/ Antibiotics/Enzymes at Industrial level by visit to any one of the Industry</p>
